From the Publisher: A major new novel from one of science fiction's most powerful voices, AURORA tells the incredible story of our first voyage beyond the solar system.

Brilliantly imagined and beautifully told, it is the work of a writer at the height of his powers.

Our voyage from Earth began generations ago.

Now, we approach our new home.

AURORA.

What We Say

A brilliant stand-alone novel from one of our best writers. Kim Stanley Robinson's first bold gambit in this tale about colonizing the stars is to make the narrator an A.I. Early in the novel, we are on a ship that has been traveling for generations towards new worlds where humanity hopes to carve out new homes. In his Mars trilogy, Robinson built drama out of the practical and human challenges of terraforming Mars. Typically, here he ponders the huge obstacles to simply making it intact to a new world light years away. When a key character orders her ship's artificial intelligence to start telling the story of their journey, it's a master stroke. It solves a constant problem in science fiction: since the narrator is an A.I., its exposition of technical info can be explained away. We get the hard data and slowly, beautifully, we see the A.I. learn and become a better narrator and eventually -- perhaps -- gain self-awareness. For a while this seems the book's major accomplishment. But then Robinson pushes further and plot twists make this story even more moving and indeed fundamentally about our innate need to survive and explore. It's like the end of the film "Gravity" but without the faux overheated drama; here the moment is earned. "Aurora" becomes deeply moving, as well as entertaining and compelling and provoking. In short, everything one expects from Kim Stanley Robinson. -- Michael Giltz
